

Field Audit

Prepared for Josh LeClair by John Carlo Caintic · Marketing Strategy & Automation · September 15, 2026

1. What This Covers

Every contact and opportunity custom field currently in your account, 38 contact fields and 12 opportunity fields, 50 total. Pulled directly from your account and cross-checked against the workflow audit already on file, so every recommendation below is tied to what's actually confirmed active, not a guess. Nothing has been changed yet. This is the audit only, the cleanup itself waits for your sign-off in section 6.

2. The Two Findings That Matter Most

First, you already have a real, structured lead-source field that your automations aren't using.

"Opportunity Referral" is a 32-option list covering every real source your business has, including "Lennar Sticker," "Home Show," "HomeAdvisor," and "Referral." But your lead-source workflows currently tag the contact with a raw tag instead of filling in this field. The field is already built and well designed, it's just sitting empty. This affects every lead-source workflow already built or planned, including the Lennar Window Cling campaign.

Second, real duplication across your window-count and product-interest fields. Four separate fields track roughly "how many windows or openings," with inconsistent ranges between them (one range overlaps itself, 4 to 6 and 6 to 10 both include 6). Three separate fields ask essentially "what product are you interested in," each with a different set of options. This is exactly the kind of overlap your cleanup request was aimed at.

3. Contact Fields

Field	Action	Required	Used In	Reason
ZIP Code	Keep	Required	Intake forms, service area/routing	Core to scheduling and Mapsly territory logic
Message	Keep	Optional	Contact Us form	Standard freeform intake note
Would you like to book an appointment?	Keep	Required	Intake forms	Direct scheduling intent signal

Date of appointment	Keep, verify	Optional	Referenced but not fully traced	Confirm this isn't just duplicating GHL's native appointment/calendar object before keeping it long term
How soon are you looking to have your window furnishings installed?	Keep	Optional	Intake forms	Well-built timeline field, genuinely useful for prioritization
Which type of window furnishing are you looking for?	Consolidate	Optional	Intake forms	Duplicate of "What type of window treatments are you interested in?" below, different options for the same question, pick one and retire the other
What type of window treatments are you interested in?	Consolidate	Optional	Intake forms	Same duplication as above
Approximately how many openings need treatments?	Consolidate	Optional	Intake forms	Overlapping ranges (4-6 and 6-10 both include 6), one of four window-count fields
Number of Windows	Consolidate	Optional	Intake forms	One of four window-count fields
What is the size of your project?	Consolidate	Optional	Intake forms	Worded differently but the same underlying data as the two above
Lead Source	Retire or repurpose	Optional	Not confirmed written by any active workflow	Superseded by the opportunity-level "Opportunity Referral" field, freeform text isn't reportable the way a picklist is
Form Source	Keep	Optional	Tracking/attribution	Distinct from Lead Source, appears to capture which specific form fired, keep pending confirmation
Landing Page	Keep	Optional	UTM/tracking	Standard attribution field
utmSource / utmMedium / utmCampaign / utmContent / campaignId	Keep	Optional	UTM/tracking, ad platform integrations	Standard attribution set, keep all five as-is
UTM_PARAMS	Retire	Optional	Confirmed unused	Checked all 5 workflows in the "3. Lead Sources" folder directly, none reference it. Raw catch-all blob duplicating the five individual UTM fields above, safe to retire

Neighborhood	Clarify with you	Optional	Not confirmed	Options don't read as actual neighborhoods, more like a project tier, likely overlapping with "Class" below
Class	Clarify with you	Optional	Not confirmed	Same overlap concern as Neighborhood above
budget_range	Keep, rename	Optional	Intake	Inconsistent naming style versus the rest of your fields, keep the data but rename for consistency
How many stars would you rate our services?	Keep	Optional	Review/feedback flow	Active review-collection field
How can we improve our services?	Keep	Optional	Review/feedback flow	Pairs with the star rating above
Anything else we should know?	Keep	Optional	Intake forms	Standard open-notes field
Scouting Report	Keep, verify workflow status	Optional	Written by "Scouting report workflow" (currently Draft)	The only AI-powered workflow in your account writes here, confirm whether that workflow should be reactivated before treating this field as live
MyBlindCo Lead ID	Keep	Optional	MyBlindCo webhook sync (confirmed)	Real integration field, actively used
My Blind Co Contact ID	Keep, clarify naming	Optional	MyBlindCo webhook sync (confirmed)	Two separately named MyBlindCo ID fields exist, confirm both are genuinely distinct, not an accidental duplicate
MyBlindCo Appointment ID	Keep	Optional	MyBlindCo integration	Real integration field
Closing Date (contact)	Keep, reactivate sync	Optional	Synced from opportunity (currently Draft/inactive)	The sync workflow that keeps this matched to the opportunity version is sitting inactive, reactivate it or this field will drift out of sync
Partner Referral Email	Keep	Optional	"(Partners) Write Referral Email to Opportunity" (confirmed active)	Actively used partner-program field
Contact Partner Name	Clarify with you	Optional	Partner program	Possible overlap with "Referral Partner" and "Partner Referral Contact" at the opportunity level, confirm the distinction is intentional
Partner Record ID	Keep	Optional	Partner program	Internal reference ID

Partner Contact Title	Keep	Optional	Partner program	Used for partner segmentation
Contact Partner Status	Keep	Optional	Partner program	Active/Inactive/Potential Partner tracking
Partner Days Available	Keep	Optional	Partner program	Scheduling field for partner outreach

4. Opportunity Fields

Field	Action	Required	Used In	Reason
Lost - Reason	Keep	Optional	Pipeline management	Valuable for win/loss reporting
Building Type	Keep	Required	Pipeline, builder/partner tracking	Directly relevant to the Lennar builder relationship and similar partner accounts
Product Interest	Keep	Optional	Pipeline	Keep at the opportunity level as the confirmed product line, separate from the contact-level intake fields once those are consolidated
Window Count	Consolidate	Optional	Pipeline	One of the four window-count fields, the most reasonable to keep as the confirmed opportunity-level figure once the contact-level duplicates are retired
Closing Date (opportunity)	Keep	Optional	Pipeline, synced to contact via the inactive workflow noted above	Reactivate the sync rather than retire either field
Opportunity Referral	Keep, start using	Should be required	Not currently populated by active workflows	The single most valuable field in the whole audit, a real structured lead-source list that already includes "Lennar Sticker." Recommend wiring lead-source workflows to fill this directly instead of relying on tags alone
TVA Deal Stage	Keep	Optional	Partner/referral tracking	Confirmed not a duplicate, checked directly against all 5 pipelines' native stage names, none match. Tracks partner payment status, a different axis from pipeline stage
TVA Referral Value	Keep	Optional	Partner referral payout tracking	Real, used field
Referral Partner	Clarify with you	Optional	Partner program	Possible overlap with "Contact Partner Name" and "Partner Referral Contact"

Partner Referral Contact	Clarify with you	Optional	Partner program	Same overlap concern
Partner Referral Email	Keep	Optional	"(Partners) Write Referral Email to Opportunity" (confirmed active)	Actively used, synced from the contact-level version
Gift Card Number	Keep	Optional	Promotions	No overlap found

5. Fields to Hide From Employee View

These are backend or integration plumbing, not something Renee or Kelli need visible during a live customer call: MyBlindCo Lead ID, My Blind Co Contact ID, MyBlindCo Appointment ID, all five UTM fields, UTM_PARAMS, campaignId, Partner Record ID, Form Source, Landing Page, Scouting Report, TVA Deal Stage, and TVA Referral Value. Recommend a separate field layout for staff that leaves all of these out, keeping only what they'd actually ask a customer or need to reference live.

6. Confirmed Through Live Testing Since This Audit

Rather than rely only on documentation, the forms and workflows behind these fields were tested directly.

- "1. New Lead" is confirmed working correctly for both Strategy-Hero Lead Form and Strategy-Contact Us Form: a fresh test submission creates an opportunity, assigns an owner, applies tags, and sends an SMS.
- That same live test directly proves Finding #1 in section 2: the resulting opportunity's custom fields came back completely empty, "Opportunity Referral" was not populated even though the workflow ran successfully.
- TVA Deal Stage is confirmed not a duplicate of the native pipeline stage, no longer an open question.
- UTM_PARAMS is confirmed unused, checked all 5 workflows in the "3. Lead Sources" folder directly, none reference it. Safe to retire.
- Three other live forms (Consultation-Calendar, the "Website" form, and the Lennar Window Cling Form) are confirmed to have zero automation attached at all, no tag, no opportunity, no workflow. These sit outside this field cleanup and are logged separately.

7. What Needs Your Input Before This Is Final

1. Confirm "Date of appointment" isn't a redundant shadow of the native appointment/calendar object. Currently blocked: a separate, confirmed bug in the live appointment booking calendar is preventing test bookings from completing, so this can't be tested until that's fixed.
2. Your read on Neighborhood versus Class, what each is actually meant to capture.
3. Your read on the three partner-name-ish fields (Contact Partner Name, Referral Partner, Partner Referral Contact), confirm the intended distinction between them.
4. Your preference on the consolidated field names and ranges for the window-count cleanup and the product-interest cleanup, before either gets touched.
