

Workflow Cleanup & Documentation

Prepared for Josh LeClair by John Carlo Caintic · Marketing Strategy & Automation · September 5, 2026

1. Full Inventory

The account currently holds **85 workflows** across six folders. Just over half of them, 44, are still sitting in Draft. Nearly half of everything, 43 workflows, lives inside a single folder called "6. Inactive Automations," which turns out to matter a lot more than the name suggests (more on that in Anomalies below).

Metric	Count
Total workflows	85
Published / live	41
Draft	44
Sitting inside "6. Inactive Automations"	43

Every workflow in the account, listed exactly as it sits in GHL, grouped by the folder it's actually filed under.

1. Lead Pipeline (New)

Name	Status	Last Modified

2. Anomalies

Sitting in Draft when it should be live: "My Blind Co - GHL Justin" has 308 past enrollments, so it clearly ran for a while before someone reverted it to Draft. Its counterpart, "My Blind Co - GHL Erica," is still Published, and opening both shows they're structurally near-identical: same four booking-source tags, same dedup check, same MyBlindCo webhook, same field update. Since "1. Appointment Booked" assigns leads to either Erica or Justin by name, these look like parallel, salesperson-specific copies of the same sync logic rather than genuinely different automations. That changes the fix here from a simple republish to a real decision for Josh: republish Justin's copy as-is and keep maintaining two nearly identical workflows, or consolidate into one shared MyBlindCo sync that isn't tied to a specific salesperson. Two more Draft workflows still have real, currently-active contacts inside them right now, which is even stronger evidence something here isn't behaving like a retired workflow should: "Appointment Booked Workflow" has 19

people active in it (and turns out to share the exact reminder-duplication pattern behind the mismatched-reminder-emails item, see below), and "Drip Campaign Workflow" has 2. Before either gets touched, those contacts need to be accounted for, either they finish naturally, or someone moves them, or there's a reason this old version is still doing something the new one isn't. Two more Draft workflows are worth a decision from Josh for the same reason: "(Partners) Write Partner Details to Opportunity" (24 past enrollments, sitting in the current Partner Automations folder) and "05. Measured/Pending Service Workflow" (41 past enrollments, no live counterpart found anywhere else in the account under that name).

Untouched for months: six live workflows are still enrolling people but haven't been opened or touched in months. **Trigger Partner Data Sync** (185 days), **Map Partner Data to Contact** (184 days), and all four Partner Communications workflows (102 days each). None of them are confirmed broken, but none have been checked either, and that's exactly the kind of thing that sits quietly until it isn't quiet anymore.

Found along the way, not something the roadmap named up front: GHL's own "Needs Review" list flags two workflows with unresolved errors from the past 30 days, and both are ones this audit already leaned on as evidence that things were working. "My Blind Co - GHL Erica" (the live webhook to MyBlindCo) has failed webhook calls for at least two contacts, Brett Driscoll (Aug 28) and Nicholas Carey (Aug 24). It's live, but it isn't reliably getting data to MyBlindCo. "(Partners) Workflow: Send Partner Objects to Mapsly" failed to send three partner records on August 12th: Fischer Homes - Hampton Walk, Fischers Homes - The Townes at Hampton Walk, and Lennar - Ravinia. Neither error has been marked as read or looked into yet.

Also found along the way: the customer-journey mapping plan assumes GHL already has a live pipeline tracking order and installation status (stages like Production Complete, Order Shipped, Installation Scheduled). That pipeline exists, but every one of its nine workflows is sitting in Draft, inside the inactive folder. Right now, nothing on the GHL side is actually tracking order or install status.

Still open, not yet resolved: the missing existing-customer exclusion the roadmap flagged hasn't been found yet. "New Lead" looked like the obvious candidate and was opened specifically to check; it turns out to already handle that correctly, so it's ruled out rather than confirmed. The two mismatched appointment reminder emails now have a stronger, more concrete explanation than first thought. "1. Appointment Booked" repeats its own reminder sequence eight times internally (four lead sources, doubled across the opportunity-found and opportunity-not-found paths), a pattern its own builder flagged as something to fix, though the note undercounts it as four. All eight copies are confirmed identical to each other, so that internal duplication is a clean, ready-to-implement fix on its own. The legacy "02. Appointment Booked Workflow" (Draft, in the old Lead Flow Pipeline) has the same eight-way pattern and still has 19 real people active inside it right now. That means two different versions of the same reminder sequence are both actively texting and emailing real customers today. If the wording drifted between the current version and

this old one even slightly, that alone explains two customers getting different-sounding reminders for the same kind of appointment, and it's a live issue right now, not a theoretical one.

Found while documenting the workflows themselves: "7. Not Booked Workflow" lives in the current "2. Sales Pipeline (New)" folder and is Published, but its own trigger watches stage changes on a pipeline called "Lead Flow Pipeline," not "1. Lead Pipeline (NEW)" or "2. Sales Pipeline (NEW)." That name matches the legacy workflow folder full of Draft duplicates documented in Sort By Function. Either this live workflow was never updated when the account was rebuilt onto the new pipelines, or "Lead Flow Pipeline" is still a real, separate pipeline object quietly running in parallel. What's now confirmed: both "Exterior Screens Facebook Lead Form" and "Version 3 Facebook Lead Form" explicitly enroll contacts into "7. Not Booked Workflow" directly through an Add to Workflow action, bypassing its trigger entirely, so this workflow is almost certainly still receiving contacts through that direct path even if its own trigger never fires. Still worth confirming with Josh whether "Lead Flow Pipeline" itself is dead weight or something still in use, especially since "(Partners) Write Partner Details to Opportunity" also triggers off the same pipeline, so this isn't a one-off reference.

3. Sort By Function

Every workflow, current and legacy, sorted into the seven categories the roadmap names. This is what actually makes the duplication visible: sorted this way, it's obvious the account is carrying a second copy of itself in several categories, not just one folder that happens to be named "Inactive."

Category	In Current Folders	In Legacy Folder	Notes
Lead Intake	12	11	Nearly one-for-one duplication; see the exact-name matches below
Appointment Lifecycle	6	19	The biggest overlap in the account by far, most of the old Sales Order and Customer Order Flow pipelines
Response & Escalation	2	0	Clean, no legacy duplicates
Nurture	2	3	Includes Drip/Nurture, the reference pattern for the Week 7-8 Partner nurture build
Partner	11	0	Clean, no legacy duplicates
Recovery	5	3	

Internal / Admin	4	7	Includes the MyBlindCo webhook; the legacy side includes three of the four dead MyBlindCo-named workflows
------------------	---	---	---

Sorted this way, "6. Inactive Automations" isn't just a folder of old workflows, it's most of a second copy of the account, and Appointment Lifecycle is where that shows up hardest: 19 legacy workflows against only 6 current ones. At least eight workflows share the exact same name as something that's live today: **Google Ad (Exterior) to GHL**, **Google Ads (home page) to GHL**, **Auto Missed Call Text-Back**, **Phone Number Tracking**, and **QR Code and Landing Pages Lead Tracker** all exist twice, word for word, once Published and once Draft. A few more are near-matches with "Workflow" tacked onto the end. This looks like the leftover of an earlier rebuild that was never fully cleaned up.

MyBlindCo has its own version of this: there are **four** separate MyBlindCo-named workflows spread across two folders, not two. Beyond the live "Erica" and Draft "Justin" pair, "GHL to Myblindco" and "My Blind Co - GHL" are both sitting in the old folder, both at zero enrollments, and both look genuinely dead.

Not everything in that legacy folder is actually dead, though. "01. New Lead Opt in Workflow" is the one Published workflow sitting inside "6. Inactive Automations/Lead Flow Pipeline," and it turns out to still receive live traffic: both "Google Ad (Exterior) to GHL" and "Google Ads (home page) to GHL," two current lead-source workflows, explicitly enroll new contacts into it directly. It can't be treated as a safe archive candidate the way the rest of that folder can, and it raises its own question worth resolving: is it doing the same job as "1. New Lead" in the current Lead Pipeline (New) folder, with two separate active new-lead paths now running side by side?

Not everything is old-versus-new, either. Inside the current, live "2. Sales Pipeline (New)" folder, both **"8. Cancelled Appointment"** and **"Appointment Cancellation Workflow"** are Published and confirmed to be real duplicates, not just similarly named: both fire on a cancelled appointment and both start by removing the contact from "1. Appointment Booked." But the builds have drifted apart since. "8. Cancelled Appointment" opens with a text message and runs three SMS touches over roughly three days, ending in a personal follow-up task if the contact still hasn't rebooked. "Appointment Cancellation Workflow" opens with an actual cancellation email instead, runs only two SMS touches, and ends by tagging the contact "nurture" instead of creating a task. Two different recovery strategies for the same trigger, both live at once.

4. Plain-English Descriptions

One paragraph per workflow: what triggers it, what it does, who it notifies, and how someone exits it. Built up as each workflow gets opened and reviewed; this section grows over time rather than all at once.

All 85 workflows documented. Entries marked with an italicized note haven't had their full canvas confirmed; everything else below is complete.

1. Lead Pipeline (New)

1. New Lead PUBLISHED

New Lead fires when someone submits either the Strategy-Hero Lead Form or the Strategy-Contact Us Form. The first thing it does is check whether the person is already tagged as an existing customer. If so, it stops right there and does nothing further, which is worth calling out because this was the leading suspect for the roadmap's missing-exclusion problem, and it turns out to already handle that correctly. Everyone else gets an opportunity created in the new Lead Pipeline, gets assigned to Renee, and gets tagged and welcomed by email while Kelli Martin, Main Office, and Renee Isley get an internal text. If half an hour goes by and the lead hasn't moved off the New Lead stage, Josh gets a personal text at his own number warning that the lead has gone untouched for an hour; ten minutes after that, if it's still stuck, the lead just gets tagged as escalated with no further outreach visible from there. Two smaller things worth a look while someone's in there: a branch partway through the workflow appears to do the same thing regardless of which way it goes, and duplicate opportunities are allowed on the same contact, which could in theory double up if someone submits the form twice.

1.1 New Lead Follow-Up Task Chain PUBLISHED

This one runs alongside New Lead, but it's triggered differently: it fires whenever a task assigned to either Erica Stephenson or Renee Isley gets marked complete. From there it just keeps checking: is this contact now sitting in Appointment Booked or Sold? If yes, it's done. If not, it creates another task for Renee asking her to reach out within ten minutes, then checks again, and again, with at least five rounds of this visible in what was captured. It's a solid, deliberately-built safety net, which is exactly why it's odd that it shows zero enrollments ever. Either tasks in this account rarely get completed by Erica or Renee specifically, or this workflow has simply never had the chance to run. Worth asking Josh which it is.

2. Attempting Contact PUBLISHED

Attempting Contact picks up in one of two ways: either the opportunity's stage actually changes to Attempting Contact, or an outgoing call comes back busy, voicemail, or no-answer. Either way, the contact gets pulled out of whatever workflow it was in before, assigned to Renee, and matched to an opportunity, updating one if it exists or creating one if not. From there, Main Office, Renee, and Kelli all get an email, then another a day later, and after that second day the contact gets tagged "nurture," which is what hands it off to Drip/Nurture below. There's a sticky note on the canvas explaining more of the reasoning here, but too much of it was cropped out of what could be captured to quote directly. This one's clearly in active use: 147 people have passed through it, two are in it right now.

4. Unqualified PUBLISHED

Fires when the opportunity's stage changes to (almost certainly) "Unqualified" within "1. Lead Pipeline (NEW)," though the trigger's own stage reference shows the same broken-reference warning icon seen on several other workflows in this account, including the current, live "1. Appointment Booked." Finds or creates the opportunity, tags it "disqualified" either way, and ends. This closes out "1. Lead Pipeline (New)" completely.

5. Spam PUBLISHED

Spam fires either when a contact gets tagged "spam" directly, or when its opportunity's pipeline stage changes to Spam on its own. Either way, the contact comes out of whatever workflow it was in, and the opportunity gets found or created and set to the Spam stage with a status of Abandoned, using the same efficient shared-sequence design as Drip/Nurture, where the "just created" path jumps back into the same next step rather than repeating it. From there it moves into an Enable/Disable DND step, though which direction that toggle actually goes wasn't visible in what was captured. Worth a follow-up look, since that's the difference between correctly shutting off marketing to a spam contact and accidentally leaving it on. Nobody gets notified anywhere in this one; it's a quiet cleanup workflow, unlike the others documented so far.

6. Future Appointments PUBLISHED

Future Appointments fires when an opportunity's pipeline stage changes to "Future Appointment" within Lead Pipeline (NEW). It assigns the contact to Renee, pulls it out of whatever workflow it was in before, then finds or creates the opportunity and sets it to the Future Appointment stage with an Open status, the same duplicate-opportunities-allowed pattern seen elsewhere in this account. *What happens after that isn't confirmed. The canvas continues past the point captured, so who gets notified and how someone exits this workflow are both still open questions.*

7. Customer Reply Response & Escalation PUBLISHED

This one fires when a customer replies specifically over SMS. It waits 15 minutes, creates a follow-up task, waits another 15 minutes, and if nothing's changed by then, texts Kelli Martin, Main Office, and Renee Isley: "ESCALATION: [Contact] replied 30 minutes ago and still hasn't been followed up on. Please check Conversations and respond now." *What the task itself says, and what happens after the escalation text goes out, isn't confirmed. The canvas continues past the point captured.*

7.1 Reply Task Completed, Exit PUBLISHED

This one fires when a task gets marked complete, but only if the task's assigned user is not Renee Isley. It removes the contact from whatever workflow it was in, then marks something as read. *The canvas continues past that point; what's captured stops there.* It reads as the exit companion to "7. Customer Reply Response & Escalation" above: when someone other than Renee completes the follow-up task that workflow creates, this pulls the contact out of the escalation chain and clears the notification, so the 30-minute escalation text doesn't keep firing once a reply has actually been handled.

3. Drip/Nurture PUBLISHED

Drip/Nurture is the workhorse of the account: 810 contacts have gone through it and 717 are in it today. It kicks off the moment a contact gets tagged "nurture," though if that contact already looks booked, it skips the whole thing immediately. Otherwise it settles into a simple rhythm: send an email, wait thirty days, check whether the contact has booked an appointment yet, and if not, send the next one. That repeats for eleven emails in a row, almost a full year of content, and the only way out early is booking an appointment. It's also a cleaner build than New Lead: instead of duplicating all eleven rounds for both the "opportunity already existed" and "opportunity just got created" paths, it uses a single jump step to merge them back into one shared sequence. The one thing that couldn't be confirmed is what happens after email eleven; the trail ends at another jump step whose destination wasn't visible in what was captured. Since this is the exact pattern the Week 7-8 plan wants to reuse for partner nurturing, it's worth getting a clean look at that last step before building the copy.

2. Sales Pipeline (New)

1. Appointment Booked PUBLISHED

This one comes with its own sticky note left on the canvas by whoever built it, so this description is theirs, confirmed against the full canvas rather than left as just the note. It runs automatically whenever an appointment's status is confirmed. From there: removes the contact from whatever workflow it was in and clears its assigned user (this "Remove from Workflow" step carries the same broken-reference warning icon confirmed throughout the legacy "Inactive Automations" folder, so that issue isn't confined to old workflows, it's here in a current, live one too); assigns the booked lead to Erica or Justin; checks whether the contact already has a deal on file, updating it if so or creating one if not; checks where the lead came from (Facebook, Google, Phone Call Lead, or none of those) and tags it accordingly; sends a booking confirmation email right away; then waits a day, sends a 1-day reminder email, waits until 2 hours before, sends a 2-hour reminder, waits until 1 hour before, sends a 1-hour reminder, sends an internal SMS alert to staff, and ends. Confirmed to end cleanly across all eight branches (four lead sources, doubled across the found and not-found paths). The builder's own note explains why it's built this way: every appointment needs a confirmation and a reminder sequence regardless of where the lead came from, the source only changes which tag gets applied, not the reminder steps themselves.

The builder left a note flagging this as something to fix, though the full canvas shows the actual scale is bigger than the note describes: it's eight duplicated copies of the reminder sequence, not four. The note counts by lead source alone; the canvas shows each of those four sources doubled again across the opportunity-found and opportunity-not-found paths underneath it, for eight identical copies total. All eight have now been checked directly against each other and confirmed identical, so this is a clean, ready-to-implement fix with no wording decision attached: keep one branch's copy as the canonical sequence, replace the other seven's post-tag steps with a "Go to" action pointing at it, then remove the orphaned duplicate nodes once that's tested. Comparing this workflow against the legacy "02. Appointment Booked Workflow"'s identical eight-way version is still the open piece, that's what the "two mismatched reminder emails" item actually depends on, not the internal duplication inside this one workflow.

2. Appointment Completed PUBLISHED

Fires either when an appointment's status changes to "Showed" (Normal event type, contact-only enrollment, specifically in "The Window Valet Appointment Booking Calendar"), or when the opportunity's pipeline stage changes to "Appointment Completed" in Sales Pipeline (New). Either way: pulls the contact out of whatever workflow it was in before, finds or creates the opportunity, waits 30 minutes, then sends a "Thank you Email after Appt" to the contact. *What happens after that isn't confirmed, the canvas continues past the thank-you email.*

3. Proposal Sent PUBLISHED

Fires when the opportunity's stage changes to "Proposal Sent" in Sales Pipeline (New). Finds or creates the opportunity, sends an internal notification email to Kelli Martin right away, then settles into a check-then-nudge rhythm: wait 3 days, check if the contact has moved to Sold, and if so exit immediately. If not, text the contact (SMS #1), wait 4 more days, check again, text again (SMS #2), wait 7 more days, check a third time, text once more (SMS #3), and if still not sold, create a task, "Proposal follow-up needed: [Contact]," describing exactly what happened: "[Contact]'s proposal has had 3 automated follow-ups over 2 weeks with no response. Please reach out personally to check where things stand before this goes cold."

4. Follow Up PUBLISHED

Fires when the opportunity's stage changes to "Follow Up" in Sales Pipeline (New). Finds or creates the opportunity, sends a follow-up email and a text to the contact, waits 2 days, then sends an internal notification email to Kelli Martin, Renee Isley, and Main Office. *What happens after that isn't confirmed, the canvas continues past that notification.*

5. Sold PUBLISHED

Fires when the opportunity's stage changes to "Sold" in Sales Pipeline (New). Finds or creates the opportunity, sets its stage to Sold and status to Won either way, then tags the contact "active client." *What happens after that isn't confirmed, the canvas continues past the tag step.*

6. Not sold PUBLISHED

This one comes with its own sticky note left on the canvas, so this is the builder's own account of what it does: it runs when a deal's pipeline stage changes to "Not Sold." It checks whether a deal exists (the next steps run the same either way), tags the contact "not sold," waits a day, sends a follow-up email, then adds the contact directly into the Drip/Nurture automation. The builder's own reasoning: a "not sold" outcome isn't necessarily final, so this gives the lead one more nudge before rolling them into ongoing nurture instead of dropping them entirely.

7. Not Booked Workflow PUBLISHED

Fires when an opportunity's stage changes to "Not Booked," but its trigger watches the "Lead Flow Pipeline" pipeline, not "1. Lead Pipeline (NEW)" or "2. Sales Pipeline (NEW)," despite this workflow living in the current "2. Sales Pipeline (New)" folder (flagged in Anomalies above). Waits a day, round-robin assigns the contact to Kelli or Renee if unassigned, finds or creates the opportunity in that same Lead Flow Pipeline, sends a re-engagement email ("Still Thinking About Window Treatments, [First Name]"), waits another day, notifies the contact's assigned owner by both email and SMS to call the lead, waits an hour, then creates a task to update the lead's status. *What happens after that task isn't confirmed, the canvas ends there.*

8. Cancelled Appointment PUBLISHED

Fires when an appointment's status changes to "cancelled" (Normal event type, contact-only, specifically "The Window Valet Appointment Booking Calendar"). First removes the contact from "1. Appointment Booked." Waits an hour, then texts them: "Hey [Contact], sorry we couldn't connect today. Want to grab a new time?" with a booking link. Checks if they've rebooked (active in Appointment Booked); if so, ends. If not: waits a day, texts again, checks again; if still not rebooked, waits 2 more days, texts a third time, then creates a task. *What happens after that task isn't confirmed, the canvas ends there.*

9. No Show Recovery PUBLISHED

Mirrors "8. Cancelled Appointment" above, but triggers on "no-show" appointment status instead of cancelled, with the same calendar/event-type filters. Same three-touch SMS and rebook-check pattern, and if still not rebooked after the third text, creates a task assigned specifically to Renee Isley: "Reschedule needed: [Contact]," describing exactly what happened: "[Contact] no-showed and hasn't rebooked after 3 automated reminder texts over 2 days. Please follow up personally, this lead is still worth reaching." Ends there, confirmed.

Appointment Cancellation Workflow PUBLISHED

Also fires on cancelled appointment status, with the same first step as "8. Cancelled Appointment": removing the contact from "1. Appointment Booked." From there the build diverges. This one opens with an actual cancellation email rather than a text, waits 2 hours before checking if the contact has rebooked, then runs two SMS touches a day apart (not three). If still not rebooked after both, it tags the contact "nurture" and ends, handing off to Drip/Nurture, instead of creating a personal follow-up task the way "8. Cancelled Appointment" does. See Sort By Function and Fix Or Consolidate Overlaps for what this means for the two workflows together.

Self-Booked Appointment Confirmation PUBLISHED

Fires when an appointment's status changes to "confirmed," same Normal event type, contact-only, same specific booking calendar as the other appointment-status workflows here. First checks whether the booking is running as a guest booking; if so, creates a task, waits 2 hours, then checks again whether the contact is now active in "1. Appointment Booked." If not, sends an internal SMS reminder to Kelli Martin, Main Office, and Renee Isley: "Reminder: [Contact]'s self-booked appointment ([date]) still needs confirmation. Please reach..." *What happens on the non-guest path, and the rest of that reminder message, isn't confirmed; both were cut off in what was captured.*

3. Lead Sources

After Business Hours PUBLISHED

Fires when a customer replies through any of four channels: chat widget, email, SMS, or call. Checks whether it's currently after business hours; if so, sends an SMS. If it's during business hours, the workflow just ends, since staff already see the reply directly. *What the after-hours text actually says, and what happens after it's sent, isn't confirmed, the canvas continues past that point.*

Auto Missed Call Text-Back PUBLISHED

Fires on a missed call. First excludes a specific list of named partner and team contacts from getting the automated text-back, ending immediately for them. For everyone else: waits a slight delay (the step is literally named so it "doesn't feel like a bot"), assigns to Renee if unassigned, tags the contact, texts the lead back automatically, pushes a notification to whoever's assigned, then sends an internal SMS to Kelli Martin, Main Office, and Renee Isley. *What that internal message says in full, and what happens after, isn't confirmed, the canvas continues past that point.*

Exterior Screens Facebook Lead Form PUBLISHED

Fires when someone submits the "Exterior Screens Book Schedule - Window Valet Lead Form" on the Window Valet Studio Facebook page. Assigns to Renee, sends an internal notification email to Renee, Main Office, and Kelli, creates an opportunity in Lead Pipeline (NEW) at the New Lead stage, tags the contact for this specific ad source, emails a booking link, waits 2 minutes, texts the same booking link, waits 35 minutes, sends an internal SMS reminder to staff, then waits a full day and checks whether the pipeline stage shows an appointment booked. If so, it ends. If not, it explicitly enrolls the contact into "7. Not Booked Workflow" using an Add to Workflow action, then ends. This confirms "7. Not Booked Workflow" gets contacts two ways: its own pipeline-stage trigger (flagged as possibly mismatched in Anomalies), and direct enrollment like this one, so it's likely still receiving contacts even if that trigger never fires on its own.

Google Ad (Exterior) to GHL PUBLISHED

Fires on an inbound webhook from an external ad platform (a premium, paid trigger). Extracts first name, last name, email, phone, and postal code from the payload, creates the contact, tags it "google_ads_exterior," then explicitly enrolls the contact into "01. New Lead Opt in Workflow" using an Add to Workflow action, and ends. That target sits in the legacy "6. Inactive Automations/Lead Flow Pipeline" folder, documented as legacy earlier, but this confirms it's actually still receiving live traffic from this workflow (see the correction in Sort By Function).

Google Ads (home page) to GHL PUBLISHED

Nearly identical to "Google Ad (Exterior) to GHL" above: same inbound webhook trigger, same first name, last name, email, phone, and postal code extraction, creates the contact, tags it "google_ads_homepage" instead, and also enrolls it into "01. New Lead Opt in Workflow." A second confirmed source feeding that same legacy-folder workflow.

New Lead Landing Page PUBLISHED

Fires when a contact gets tagged with any of four specific promo tags from what looks like a landing page: exterior screens, free motorization, buy 2 get 1 free, or buy 1 get 1 50% off. Creates an opportunity, assigns it to Kelli, and sends an internal SMS notification, ending there. *Who that SMS goes to and what it says wasn't confirmed, only the canvas structure was captured.*

Partner New Leads Opt-in PUBLISHED

Fires when a contact gets tagged "partner lead." Assigns to Renee and Kelli, creates an opportunity, texts the contact, waits 3 minutes, sends an introduction email, waits 3 days, sends a follow-up text, then tags the contact "Drip." This confirms exactly what the Week 7-8 roadmap already flagged: this workflow applies an interim "Drip" tag stopgap rather than a proper partner nurture sequence. *What happens after that tag isn't confirmed, the canvas continues past it.*

Phone Number Tracking PUBLISHED

This one has its own sticky note, so this is the builder's own account: it runs whenever a call comes in on one of six tracked phone numbers (main number, website, or one of four landing pages). It waits a minute, checks which specific number the call came in on and tags the contact accordingly, then adds the contact directly into the New Lead automation. The builder's own reasoning: this tells them exactly which number, and which ad or page, brought in each call, without needing six separate follow-up automations, since everyone funnels into the same New Lead process once tagged. Confirmed via the identical sticky note on this workflow's legacy sibling in Lead Tracker Workflows: the target is "01. New Lead Opt in Workflow."

QR Code and Landing Pages Lead Tracker PUBLISHED

Fires when a customer books an appointment (same specific Window Valet booking calendar as the appointment-status workflows). Checks which UTM campaign or source parameter is attached, covering six landing-page and QR-code sources: upgrade, buy-2-get-1, buy-1-get-1, exterior, and neighborhood landing pages, or a QR code scan. Tags the contact with a source-specific booking tag, then explicitly enrolls it into "1. Appointment Booked" via an Add to Workflow action. If none of the six sources match, it just ends without tagging or enrolling. This is a confirmed source feeding landing-page and QR bookings into "1. Appointment Booked."

Version 3 Facebook Lead Form PUBLISHED

Fires on Facebook lead form submission, but consolidates four different form versions into one trigger ("V.3 Questions and Book Schedule," "V.2 Questions and Book Schedule," "V.2 Book Schedule," and the original "Book Schedule" form) rather than needing four separate workflows. From there it mirrors "Exterior Screens Facebook Lead Form" almost exactly: assigns to Renee, notifies staff, creates an opportunity, tags the source, emails and texts a booking link two minutes apart, waits 35 minutes for another internal notification, then waits a day and checks if an appointment got booked. If not, it enrolls the contact into "7. Not Booked Workflow" the same way. That's now three confirmed sources feeding that workflow directly, on top of its own trigger.

4. My Blind Co

My Blind Co - GHL Erica PUBLISHED

This one has its own sticky note, so this is the builder's own account: it runs when a contact gets tagged as booked from Google, Facebook, the appointment form, or phone. It checks whether the contact has already been synced to MyBlindCo, stopping immediately if so to avoid duplicates. If not yet synced, it sends the contact's info to MyBlindCo through a custom webhook, tags the contact to mark it as sent, then updates a contact field (My Blind Co Contact ID) with the ID MyBlindCo sends back. The builder's own note flags something specific: there's a second webhook step further down that's currently switched off, and needs a decision on whether to turn it back on or remove it, since it isn't doing anything right now either way.

My Blind Co - GHL Justin DRAFT

Structurally near-identical to "My Blind Co - GHL Erica" above: same four booking-source tags, same dedup check against an "mbc" tag, same webhook send to MyBlindCo, same tag-as-sent, same contact field update. Given "1. Appointment Booked" assigns leads to either Erica or Justin by name, these two workflows look like they were built as parallel, salesperson-specific copies of the same MyBlindCo sync logic rather than genuinely different automations (see Anomalies and Fix Or Consolidate Overlaps for what this means for the Draft-that-should-be-live decision).

5. Partner Automations

(Partners) Map Partner Data to Contact PUBLISHED

This one has its own sticky note. It has no trigger of its own; it's entered only when "Trigger Partner Data Sync" below adds the associated Partner Object to it. Once entered, it updates the Partner Contact's record with the Partner's details: name and record ID. The builder's own note: the sync requires Partner Contacts and Partner Objects to already be associated for this mapping to work.

(Partners) Write Partner Details to Opportunity DRAFT

Fires when an opportunity in "Lead Flow Pipeline" changes stage (with a Partner Referral Email present) or gets created with that field already set, the same "Lead Flow Pipeline" reference flagged as a possible legacy mismatch in "7. Not Booked Workflow," now seen a second time here. Finds the associated contact; ends if none found. Then checks whether that contact's own Contact Type is "Partner," only writing partner details onto the opportunity if so, ending without doing anything otherwise. *Worth a second look: "(Partners) Write Referral Email to Opportunity" below does a similar-sounding job without ever checking Contact Type at all, just whether an opportunity exists. Checking for Contact Type = Partner here looks like it might be testing the wrong thing, which could be exactly why this one was left in Draft rather than published.*

(Partners) Write Referral Email to Opportunity PUBLISHED

This one has its own sticky note: it copies a partner's referral email onto the opportunity of the lead they referred. It fires when a contact's "Partner Referral Email" field is added or changed (or a matching opportunity or contact gets created with it already set), waits a minute, looks for an existing opportunity tied to that contact, and if one exists, updates a field on it with the Partner Referral Email. If no opportunity exists yet, nothing happens.

Trigger Partner Data Sync PUBLISHED

This one has its own sticky note too, and it's the trigger half of the pair with "(Partners) Map Partner Data to Contact" above: someone manually associates a Partner Object with its matching Partner Contact, then adds the tag "sync partner data" to make the association official. That tag firing this workflow, which adds the Partner Object into "(Partners) Map Partner Data to Contact" to actually write the details over.

6. Inactive Automations > Customer Order Flow Pipeline

All nine workflows in this sub-folder are Draft (see Anomalies), so nothing here is currently live. Documented anyway per the roadmap's literal instruction, and because it shows exactly what this dormant pipeline was built to do if it's ever revived.

01. Sold Workflow DRAFT

Fires when a contact gets tagged "sold." Finds or creates the matching opportunity and ends there either way. No notifications, just keeping the record in sync.

02. Deposit Received Workflow DRAFT

Fires either when the opportunity's stage changes to "Deposit Received," or when an external payment succeeds. Finds or creates the opportunity. If found, assigns it to Erica or Justin, emails the sales rep internally, and removes the "sold" tag. *What happens after that isn't confirmed, the canvas continues past it.* If no opportunity is found, it just ends.

03. Ordered | In Production Workflow DRAFT

Fires when a contact gets tagged "ordered." Finds or creates the opportunity; if found, updates it and emails the customer an order update, then ends. If not found, it just ends without emailing.

04. Production Complete Workflow DRAFT

Fires when the opportunity's stage changes to "Production Complete." Waits 5 minutes, finds or creates the opportunity, removes the "ordered" tag, waits 1 day, assigns the contact to Brittany (a name not seen in any other workflow documented so far), then sends an internal SMS. *What that message says and what happens after isn't confirmed, the canvas continues past it.*

05. Order Shipped Workflow DRAFT

Fires either on a specific link-click trigger tied to "Order Shipped," or when the opportunity's stage changes to "Order Shipped." Finds or creates the opportunity; if found, emails the customer. *Whether it ends after that email wasn't confirmed, no END was visible on that path in what was captured.* If not found, it ends.

06. Order Complete | Ready for Install DRAFT

Fires when the opportunity's stage changes to "Order Complete | Ready for Install." Waits 5 minutes, finds or creates the opportunity; if found, sends an internal email notification and ends. If not found, it just ends.

07. Installation Scheduled Workflow DRAFT

Fires when a customer books an appointment specifically on the Installation Appointment Calendar, contact-only enrollment. Finds or creates the opportunity; if found, emails Kelli internally, then sends an internal SMS. *What that message says and what happens after isn't confirmed, the canvas continues past it.* If not found, it ends.

08. Installation Complete + Google Review Request DRAFT

The best-built workflow in this dormant folder. Fires either when the opportunity's stage changes to "Installation Complete," or when the contact gets tagged the same. Assigns the contact, finds or creates the opportunity; if found, sends an internal email, waits 24 hours, sends another internal notification, then texts the customer a thank-you message with a review request. It waits a day and reads their reply: a 9 or 10 rating gets an actual Google review request link, an 8-or-below rating gets a feedback acknowledgment instead of a public review ask (screening low scores out of public reviews on purpose), and anything else gets a generic follow-up text. All three paths end cleanly. If no opportunity is found, it just ends.

09. Incomplete | Remake | Reorder Workflow DRAFT

Fires when a contact gets tagged "reorder," "remake," or "incomplete," any of the three. Waits 5 minutes, assigns the contact to Brittany, finds or creates the opportunity; if found, checks which of the three tags actually fired and sends a matching email tailored to that specific situation, then ends. If not found, it just ends.

6. Inactive Automations > Lead Flow Pipeline

This sub-folder is the old, pre-rebuild version of today's lead-and-appointment system. Most of it is Draft, but two of its workflows still have real people active inside them right now (see Anomalies), and one of them (below) turned up something that matters for the still-open mismatched-reminder-emails item.

01. New Lead Opt in Workflow PUBLISHED

Fires on the same kind of form submission as "1. New Lead" today. Has the identical redundant-branch quirk found in "1. New Lead": a condition splits on trigger type, but both branches do the same thing afterward, just one adds a "strategy_form" tag first. From there: creates an opportunity, assigns to Kelli, sends an internal email and SMS ("You've got a new lead"), emails and texts a booking link two minutes apart, waits 35 minutes, sends another internal notification, creates two tasks for Kelli to update the lead's status, waits a day, then sends a follow-up email with the booking link. *What happens after that follow-up email isn't confirmed, the canvas continues past it.* This is clearly the direct ancestor of "1. New Lead" and several of today's lead-source workflows, which explains why it's still live and still being fed by current workflows (see Sort By Function).

02. Appointment Booked Workflow DRAFT

This is one of the two Draft workflows with real people still active inside it right now (19, per Anomalies), and it matters for the mismatched-reminder-emails item. Fires on the same appointment-confirmed trigger, same live booking calendar, as today's "1. Appointment Booked." Assigns to Erica or Justin, finds or creates the opportunity, then splits by lead source, Facebook, Google, Phone Call Leads, or none, twice over (once per opportunity-found path), into eight parallel copies of the exact same reminder sequence: a booking confirmation email, a 1-day reminder, a 2-hour reminder, a 1-hour reminder, and a check 2 hours after the appointment, each paired with internal staff notifications. All eight paths end cleanly. **This is the same reminder-sequence-duplicated-by-source pattern "1. Appointment Booked" has today, just older and duplicated eight times instead of four.** Since 19 real people are currently sitting inside this old version while everyone else goes through the current one, if the wording in either version has drifted even slightly, that alone would produce two customers getting different-sounding reminders for what should be the same appointment, without needing to compare four copies within one workflow at all.

02. Appointment Booked Workflow - v19 - copy DRAFT

A stray, unused copy of the workflow above (0 enrollments ever), structurally identical in every way that was checked. Looks like a leftover from editing rather than anything that was ever run separately.

05. Measured/Pending Service Workflow DRAFT

Fires either when a specific "Showed" trigger link is clicked, or when the opportunity's stage changes to "Pending Service" within this old Lead Flow Pipeline. Finds or creates the opportunity; if found, tags it "pending" and ends. If not found, it just ends.

06. Sold Workflow DRAFT (*Lead Flow Pipeline version*)

Fires on a stage change to "Sold" in the old pipeline, or a "Sold" trigger-link click. Waits 3 minutes, finds or creates the opportunity; if found, removes the "pending" tag, adds a "sold" tag, and ends. If not found, it just ends.

07. Not Sold Workflow DRAFT

Mirrors "06. Sold Workflow" above but for "Not Sold": same dual trigger, same 3-minute wait, and if the opportunity is found, removes the "pending" tag and adds a "Drip" tag instead of "sold," handing the contact off to nurture. Ends either way.

08. Drip Campaign Workflow DRAFT

The other Draft workflow with real people still active inside it right now (2, per Anomalies).

Fires when a contact gets tagged "drip." Updates the opportunity, waits a day, then runs a long, deliberately-sequenced email series with named strategic angles rather than generic numbering: an immediate "Day 1" email, then Education + Value and Social Proof a week apart, then Soft Urgency/CTA, Authority & Expertise, Common Mistakes Education, a Story-Based Trust case study, Reassurance + Low Pressure CTA, Limited Availability, Cost of Waiting, a Clear Decision email, and an Incentive Push, each 30 days apart. *The chain ends at a jump step whose destination wasn't confirmed, the canvas continues past it.* Worth noting: this old sequence has clearly-considered copywriting angles that the current "3. Drip/Nurture" doesn't show in its own structure (its 11 emails are documented there only by position, not by subject). Worth checking whether these specific angles are worth carrying forward rather than losing them if this workflow is ever archived.

Exterior Screens Facebook Lead Form Workflow DRAFT

Same shape as today's Published "Exterior Screens Facebook Lead Form": assigns to Kelli, sends an internal email, creates an opportunity, tags the source, emails and texts a booking link two minutes apart, waits 35 minutes, sends another internal notification, then waits a day. *What happens after that day isn't confirmed, the canvas continues past it.*

Google Ad (Exterior) to GHL DRAFT (Lead Flow Pipeline version)

Same shape as today's Published version: an inbound webhook (its own separate URL, distinct from the current one) extracts first name, last name, email, phone, and postal code, creates the contact, tags it "google_ads_exterior," and enrolls it into another workflow before ending. *The exact enrollment target wasn't opened to confirm, but given this matches the pattern of its Published sibling exactly, it's very likely also "01. New Lead Opt in Workflow."* Only 5 historical enrollments, so if anything external is still posting to this old webhook URL, it isn't much.

04. No Show Workflow DRAFT

Fires on a stage change to "No Show" in the old pipeline, or a "No Show" trigger-link click. Finds or creates the opportunity; if found, runs a four-part reschedule email sequence (immediately, then 1, 2, and 3 days apart) followed by a week-long wait. *What happens after that final wait isn't confirmed, the canvas continues past it.* If not found, it just ends.

Google Ads (home page) to GHL DRAFT *(Lead Flow Pipeline version)*

Same shape as its Exterior sibling above: an inbound webhook extracts first name, last name, email, phone, and postal code, creates or updates the contact, tags it "google_ads_homepage," enrolls it into another workflow, and ends. The exact enrollment target wasn't opened here either, but the pattern matches "01. New Lead Opt in Workflow" throughout this account.

Version 3 Facebook Lead Form Workflow DRAFT

The legacy ancestor of today's "Version 3 Facebook Lead Form," covering three of its four form versions (missing "V.3 Questions," which didn't exist yet when this was built). Assigns to Kelli, sends an internal email, creates an opportunity, tags the source, emails and texts a booking link two minutes apart, waits 35 minutes, sends an internal notification, waits a day, then enrolls the contact into "Not Booked" and ends. **Confirmed difference from the current version: this one has no condition check for whether an appointment was actually booked first, it enrolls everyone into "Not Booked" unconditionally after the one-day wait.** The current version added that check; this looks like a real gap that got fixed between versions, not just a rename. The internal notification's exact wording is now confirmed too: "Hey, [First Name]! It has been one hour since we sent a booking link to the lead and they still haven't booked an appointment yet. Please call the lead," followed by the contact's name, phone, and email, the same message pattern very likely shared by "Exterior Screens Facebook Lead Form Workflow" and its current-version siblings, though their own message text wasn't directly opened to confirm.

6. Inactive Automations > Lead Tracker Workflows

All 9 workflows in this sub-folder are now documented, finishing it. Several confirm or correct earlier entries in this document.

After Business Hours Workflow DRAFT

Same shape as today's Published "After Business Hours": fires on a reply through any of four channels, checks business hours, texts if after hours. Confirmed here to end cleanly either way, which the current version's canvas didn't show.

Auto Missed Call Text-Back DRAFT *(Lead Tracker version)*

Same shape as today's Published version, with one difference worth noting: this old version assigns the contact to Kelli, while the current one assigns to Renee. Otherwise identical: excludes a specific partner-name list, waits a moment "so SMS doesn't feel like a bot," tags the contact, texts the lead back, pushes a notification, sends an internal SMS, and ends cleanly (confirmed here, unlike the current version's canvas which cut off).

Facebook Comments on a Post DRAFT

Fires when someone comments a specific interested-sounding phrase on one particular named Facebook post (not any post generally). Waits a minute, auto-responds to the comment, assigns the contact to Brittany, and ends.

GHL to Myblindco DRAFT

A minimal, stripped-down version of the MyBlindCo sync: fires on appointment confirmed, sends a webhook, ends. No dedup check, no tag, no field update, unlike "My Blind Co - GHL Erica/Justin." Zero historical enrollments; reads as an early, superseded experiment rather than anything ever actually used.

Leads from Landing Page (Disabled) DRAFT

Fires on an inbound webhook (its own URL), creates a contact, sends a second webhook, then explicitly enrolls the contact into "01. New Lead Opt in Workflow" and ends. Another confirmed feeder into that legacy workflow, though this one is itself named and intended as disabled.

My Blind Co - GHL DRAFT

Confirmed genuinely broken, not just unused. Its trigger shows a visible error indicator in the builder: the pipeline filter is blank and the pipeline stage shows a raw unresolved ID instead of a stage name, meaning whatever pipeline or stage it originally pointed to has since been deleted. From there it just sends a webhook and ends. Zero historical enrollments. A clean, confirmed archive candidate, not an inferred one.

Phone Number Tracking DRAFT *(Lead Tracker version)*

This one has the identical sticky note as today's Published "Phone Number Tracking," which resolves what that entry left unconfirmed: it adds the contact into a workflow called "New Lead Opt-in" specifically, confirming "01. New Lead Opt in Workflow" as the actual target for both versions, current and legacy.

Promotions and Discounts DRAFT

Fires when a contact clicks either a "Holiday Promo" or "10% Discount" trigger link. Creates or updates the opportunity, tags the contact "Hot Lead," assigns it, notifies the owner internally, then sends a matching congratulatory email for whichever specific promo was clicked, and ends. If neither matched, it just ends.

QR Code and Landing Pages Lead Tracker DRAFT *(Lead Tracker version)*

Same shape as today's Published version: fires on appointment booked in the same live calendar, splits by the same six UTM sources, tags accordingly, and enrolls into "1. Appointment Booked." Confirms this is stable, intentional logic carried through the rebuild rather than something that changed.

6. Inactive Automations > Sales Order Pipeline

The last "Inactive Automations" sub-folder, all 5 workflows now documented, finishing that folder entirely. Every Update/Create Opportunity step across all five shows a visible warning icon in the builder, the same kind of broken-reference indicator confirmed on "My Blind Co - GHL," suggesting this whole sub-folder may be pointing at a pipeline or stage that no longer exists. One workflow also has a direct, confirmed copy-paste bug.

01. Partially Sold Interior Workflow DRAFT

Fires when a "Partial installation Interior" trigger link is clicked. Waits 5 minutes, finds or creates the opportunity (both actions carry the warning icon noted above); if found, sends a "Ready to Finish the Rest of Your Home?" email, waits 7 days, then continues into a further step. *What that next step is wasn't confirmed, the canvas continues past it.* If not found, it just ends.

02. Partially Sold exterior Workflow DRAFT

Confirmed copy-paste bug: despite being the "exterior" workflow, its trigger link filter is set to "Partial installation Interior," the identical link "01. Partially Sold Interior Workflow" listens for, not an exterior-specific one. It then sends the exact same "Ready to Finish the Rest of Your Home?" email as the Interior workflow, with no exterior-specific messaging at all. This reads as workflow 01 duplicated to make workflow 02, with the trigger link and email content never updated for the new context. Same warning icon on both opportunity steps.

03. Whole House Sold - Exterior Workflow DRAFT

Fires on its own correctly-matching "Whole House Sold - Exterior" trigger link, unlike workflow 02. Waits 5 minutes, finds or creates the opportunity (same warning icon); if found, sends a genuinely tailored email, "Thinking About the Inside of the Home Next?", a sensible cross-sell for someone who just had exterior work done, waits 7 days, sends a second email, then waits 7 more days. *What happens after that isn't confirmed, the canvas continues past it.* This one looks properly built, in contrast to 01 and 02.

04. Whole House Sold - Both Workflow DRAFT

Fires on its own correctly-matching "Whole House Sold - Both" trigger link. Same shape as workflow 03, wait, find or create opportunity (same warning icon), email, wait 7 days, second email, wait 7 more days, but both emails are only labeled generically, "Email 1" and "Email 2," not given real subject lines the way workflow 03's was. Looks unfinished rather than deliberately generic. *What happens after the second wait isn't confirmed.*

05. Whole House Sold - Interior Workflow DRAFT

Same pattern as workflow 04: correctly-matching trigger link ("Whole House Sold - Interior"), same warning icon, same generic "Email 1" / "Email 2" placeholders rather than real subject lines. *What happens after the second email isn't confirmed, the canvas continues past it.*

6. Inactive Automations

The top-level folder itself, not any of its sub-folders. All 8 workflows here are now documented, finishing this folder completely. The broken-reference warning icon confirmed earlier on "My Blind Co - GHL" and the Sales Order Pipeline shows up on several triggers and actions here too, reinforcing that a pipeline or stage got deleted at some point and broke references throughout this whole legacy area. It's since turned

up on "1. Appointment Booked" as well, a current, live, Published workflow, so this is not confined to old or dead automations.

Appointment Confirmation Workflow DRAFT

Fires on a pipeline stage change, though the trigger's own pipeline and stage reference shows the same broken-reference warning seen elsewhere in this folder. Waits 5 minutes, sends a confirmation email, waits until 24 hours before the appointment, sends a 24-hour reminder email, waits until 12 hours before, sends an SMS reminder, and ends.

Internal: Opportunity Assignment Notification DRAFT

Fires when an opportunity's assigned owner changes. Sends an internal email notification, then another internal notification. *Recipients, content, and whether it ends after that aren't confirmed, the canvas cuts off there.*

Map closing date from opportunity to contact DRAFT

Fires when an opportunity's closing date changes. Waits 2 minutes, then updates the contact's own closing date field to match. *What happens after that update isn't confirmed, the canvas cuts off there.*

Quote Follow Up Workflow DRAFT

A genuinely sophisticated follow-up system, but with two real bugs. Its trigger is named "Pipeline Stage Changed to Estimate in Review," but no actual filter is configured, so as built it would fire on any pipeline stage change anywhere, not just that one. Once running, it waits 24 hours, then repeatedly checks whether the opportunity is still sitting in that same stage (referenced only by a raw unresolved ID, the same broken-reference pattern seen elsewhere): if so, it sends a follow-up touch (SMS, then email, then SMS, then a final email), waiting progressively longer between each (2, 5, 3, and 3 days). If at any point the opportunity has moved to a different stage, it removes the contact from the workflow and stops nagging. If it's still stuck after all four touches, roughly two weeks total, it automatically moves the opportunity to "Closed - Lost." The overall design, four escalating touches then an automatic close, is a genuinely useful pattern for stale quotes, undermined here by the missing trigger filter and the broken stage references.

Scouting report workflow DRAFT

The only workflow found in this whole account that uses an AI action directly: its trigger (also carrying the broken-reference warning) fires on an opportunity change, runs a GPT-powered step, likely generating a "scouting report" from the opportunity or contact's data, then writes the result into a contact field and ends.

Temporary form automation DRAFT

True to its name: its trigger has no filters at all, meaning it fires on any form submission anywhere in the account, not one specific form. Creates the contact, creates or updates an opportunity (same warning icon as elsewhere), sends an internal notification, tags the contact, and ends. Reads like a quick catch-all that was meant to be replaced once dedicated per-form workflows existed, and never removed.

Update Opportunity to Appointment Scheduled & Update Opportunity Owner DRAFT

Fires when an appointment is confirmed. Waits, then finds or creates the opportunity (same warning icon on both paths). *What happens after that, including the "Update Opportunity Owner" part its own name promises, isn't confirmed, the canvas cuts off there.*

Form submission follow up workflow DRAFT

Fires on any of three form submissions: the Primary Lead Form with appointment booking answered "yes," the same form answered "no," or the general Contact Us form. For the "yes" group: waits 10 minutes, then checks whether the contact is also active in "Update Opportunity to Appointment Scheduled & Update Opportunity Owner" above, if so, they actually followed through on booking, so it tags them "hot lead" and ends; if not, they said yes but never booked, so it tags them "warm lead" and sends a "Book appointment nudge" email instead. For the "no" or Contact Us group, it just waits 30 seconds and sends a simple form confirmation email. A genuinely clever piece of design, checking whether stated intent actually turned into a booking, to score leads accordingly, and one of the only workflows in this account that reads another workflow's live enrollment state as a condition.

5. Partner Automations > Mapsly

(Partners) Workflow: Sync contacts to Mapsly PUBLISHED

This one has its own sticky note, so this is the builder's own account: it fires either when a contact is created with the Contact Type of "Partner," or when a contact gets tagged "mapsly contact sync." It waits one minute to make sure the record is up to date, then sends the contact's details (name, phone, email, address) to Mapsly using a webhook, and ends.

(Partners) Workflow: Send Partner Objects to Mapsly PUBLISHED

This one also has its own sticky note: it starts whenever a Partner record is created or changed. It waits a minute, then checks whether the Partner's ID field is empty, filling it in first if so, and checks whether the Partner has an address either way. If the address is missing, nothing happens and the workflow ends. If there's an address, it sends the Partner's info to Mapsly. The builder's own summary: this makes sure the ID is set and sends the info to Mapsly whenever there's an address; if either the ID or address is missing, it skips sending until both are present.

5. Partner Automations > Partner Communications

(Partners) Installation Complete - Add Partner Contact to Workflow PUBLISHED

Fires when a contact gets tagged "installation complete." Checks whether that same contact is also tagged "partner lead"; if not, it ends immediately, since there's no partner to notify. If it is, it looks up the associated partner contact through the "Partner Source - Partner Client" relationship and adds that partner into "(Partners) Installation Complete - Send Communication." This workflow's whole job is finding the right partner and routing them into the one that actually sends anything.

(Partners) Installation Complete - Send Communication PUBLISHED

This one has no trigger of its own; it only gets entered when the workflow above adds a partner contact to it directly. Once entered: texts the partner, waits 2 hours, then emails them an installation-complete notice. *What happens after that email isn't confirmed, the canvas continues past it.*

(Partners) Lead Confirmation - Add Partner Contact to Workflow PUBLISHED

Fires when a new contact is created already tagged "partner lead" (the tag is baked into the trigger itself, so no separate check is needed the way the Installation Complete version has one). Looks up the associated partner contact through the same "Partner Source - Partner Client" relationship and adds them into "(Partners) Lead Confirmation - Send Communication."

(Partners) Lead Confirmation - Send Communication PUBLISHED

Also has no trigger of its own, entered only via the workflow above. Texts the partner, waits 2 hours, then emails them a lead-confirmation notice, and ends. Same shape as "Installation Complete - Send Communication," just for a different event, and confirmed to end cleanly here.

5. Fix Or Consolidate Overlaps

In progress. Below is a specific recommended fix for each overlap found during this audit, not just a list of things worth looking at. Some are straightforward technical corrections that don't need a strategy call, they're ready whenever someone has time in the builder. Others are genuine judgment calls on which version or approach to keep, and those are marked as needing Josh's decision before anything changes. Nothing has been merged or corrected yet; this is the plan for doing that.

My Blind Co - GHL Erica and Justin (needs Josh's decision): structurally near-identical MyBlindCo sync workflows, most likely built as parallel per-salesperson copies rather than genuinely different automations, since nothing in either build actually differs beyond the assigned name. That's exactly why Justin's copy could sit reverted to Draft for a while without anyone noticing his leads simply weren't syncing. Recommend building one shared version that reads the assigned user dynamically instead of maintaining two hardcoded copies, then retiring the Justin copy once the shared version is confirmed working. Erica's build also has a second webhook step that's currently disabled and doing nothing; that needs its own decision, re-enable it or remove it, before folding her workflow into the shared version.

8. Cancelled Appointment and Appointment Cancellation Workflow (needs Josh's decision): both fire on a cancelled appointment and both start by removing the contact from "1. Appointment Booked," but the builds diverged into two different recovery strategies from there. One opens with a text, three touches, ends in a personal follow-up task. The other opens with an email, two touches, ends in a generic nurture tag. Recommend keeping "8. Cancelled Appointment"'s ending, a real task in front of staff catches a cancellation better than an automatic tag, and retiring the other once Josh confirms that's the strategy he wants. This is a call on approach, not just wording, so it shouldn't change without his sign-off.

1. Appointment Booked's reminder sequence, duplicated eight times (ready to implement, no decision needed): flagged by the workflow's own builder as four copies, one per lead source, but the full canvas shows it's actually eight, the four lead sources doubled again across the opportunity-found and opportunity-not-found paths. All eight have now been checked directly against each other and confirmed identical, so this is safe to consolidate with no behavior change: keep one branch's copy as the canonical sequence, replace the other seven's post-tag steps with a "Go to" action pointing at it, then remove the orphaned duplicate nodes once that's tested. No wording is being proposed here, just removing the duplication itself. Separately, the "Remove from Workflow" step at the top of this same workflow carries the

same broken-reference warning icon seen throughout the legacy folder, worth resolving while already in the builder for this fix.

The legacy "02. Appointment Booked Workflow" carries the same pattern, eight times over (blocked, needs message text to compare): this is the strongest lead on the roadmap's original "two mismatched appointment reminder emails" item, and it's live right now, not historical. This old, Draft version still has 19 real people active inside it, running its own eight-times-duplicated copy of the same reminder sequence in parallel with the current version's four. Resolving this needs the actual reminder message wording from both workflows side by side, which hasn't been captured yet. Once that's in hand, this becomes either a small wording fix inside the current workflow, or confirmation that customers are currently getting inconsistent reminders depending on which version they landed in.

7. Not Booked Workflow's mismatched pipeline (needs Josh's confirmation first, then a quick fix): live and Published, but its trigger and Create Opportunity step both watch a pipeline called "Lead Flow Pipeline" instead of either current pipeline. It's still receiving contacts either way, since two current lead-source workflows enroll into it directly and bypass its own trigger, but the trigger may not be firing on its own terms at all. Once Josh confirms whether "Lead Flow Pipeline" is a real pipeline still in use somewhere else or a leftover from before the account rebuild, the fix itself is simple: repoint the trigger and the opportunity step at the correct current pipeline.

01. New Lead Opt in Workflow (needs Josh's decision): sits in the legacy folder but is confirmed still actively fed by at least two, likely three, current lead-source workflows, doing close to the same job as "1. New Lead" in the current folder. Recommend Josh decide between redirecting those lead-source workflows to enroll directly into "1. New Lead" instead, retiring this one for good, or keeping it as a deliberately separate intake path if there's a reason the two need to stay apart. Either way, it shouldn't be touched until that decision is made and any lead-source workflows are repointed first.

(Partners) Write Partner Details to Opportunity and (Partners) Write Referral Email to Opportunity (ready to implement, no decision needed): both copy a referring partner's information onto the referred lead's opportunity, but they check different things before proceeding. Write Referral Email correctly checks whether an opportunity already exists. Write Partner Details checks whether the contact's own Contact Type is "Partner," which is very likely the wrong condition for this workflow's actual job, and is probably the real reason it's stayed in Draft rather than "forgotten." The fix is straightforward: change its condition to match its sibling's opportunity-existence check, confirm it behaves correctly, and it should be ready to publish.

Two broader items aren't workflow-specific fixes on their own, but set up what else can move here. At least eight exact or near-exact name duplicates exist between the live folders and "6. Inactive Automations" (see Sort By Function), and four separate MyBlindCo-named workflows exist across two folders where two are meant to. Most of that overlap resolves itself once "6. Inactive Automations" is worked through in Archive What's Genuinely Dead below, rather than needing its own separate fix here.

6. Archive What's Genuinely Dead

In progress. The roadmap's own wording matters here: anything confirmed obsolete gets formally archived, not just left sitting in Draft unused. Below is every legacy workflow sorted into where it actually stands, ready to archive now, blocked until something else resolves first, needing one more specific check before it's safe to call dead, or a real exception worth fixing instead of retiring.

Don't touch these yet, real people or a live dependency are involved: "02. Appointment Booked Workflow" (legacy) has 19 people active inside it right now, and "08. Drip Campaign Workflow" (legacy) has 2. Both need those contacts accounted for first, either they finish naturally, someone moves them, or there's a reason the old version is still doing something the new one isn't. "01. New Lead Opt in Workflow" isn't a candidate at all despite sitting in the legacy folder; it's Published, not Draft, and confirmed still actively fed by current lead-source workflows. That one's an ongoing structural decision, see Fix Or Consolidate Overlaps, not an archive question.

Ready to archive now, confirmed dead with no open questions: "My Blind Co - GHL" (confirmed broken, a visible GHL error on its trigger, not just unused), "02. Appointment Booked Workflow - v19 - copy" (a stray, structurally identical, zero-enrollment duplicate of the workflow above), "GHL to Myblindco" (a stripped-down, superseded early version of today's MyBlindCo sync), "Facebook Comments on a Post" (tied to one specific named post with no campaign still running behind it), "Leads from Landing Page (Disabled)" (already intentionally disabled; archiving it just makes that permanent), "Temporary form automation" (an unfiltered catch-all stub that fires on any form anywhere), "Appointment Confirmation Workflow," "Scouting report workflow," "Promotions and Discounts," "Internal: Opportunity Assignment Notification," "Map closing date from opportunity to contact," and "04. No Show Workflow." The last three were only partially traced canvas-wise, but each sits at zero enrollments ever, meaning they've never once fired, which is stronger evidence of being dead than an incomplete trace is evidence of anything still working.

Same shape as their current-version counterparts, no red flags found, but the full external-dependency sweep hasn't been done on these specifically: "Phone Number Tracking," "QR Code and Landing Pages Lead Tracker," "After Business Hours Workflow," "Auto Missed Call Text-Back," "Exterior Screens Facebook Lead Form Workflow," "06. Sold Workflow," and "07. Not Sold Workflow" (all legacy copies) each carry real historical enrollment. Nothing has surfaced showing any of these are still being fed the way "01. New Lead Opt in Workflow" turned out to be, but that dependency was only found by opening the specific lead-source workflows that fed it directly, not by looking at these seven on their own. Worth a quick check of whether anything current still explicitly enrolls contacts into any of them before archiving.

"Google Ad (Exterior) to GHL" and "Google Ads (home page) to GHL" (legacy) each run off their own separate inbound webhook URL, distinct from the current version's. Nothing inside GHL feeds either one, but that's a different question from whether something outside GHL, an old ad campaign still pointing at the old webhook link, is still quietly posting to it. Worth a quick check on the ad platform side before archiving either.

"Version 3 Facebook Lead Form Workflow" (legacy) is a stronger candidate than most, it's the one confirmed to have a real bug the current version fixed (no check for whether an appointment was booked before enrolling into "Not Booked"), which is good evidence it's genuinely superseded. But it was still being edited as recently as August 20th, so that recent activity is worth confirming as a one-off cleanup rather than genuine ongoing use before archiving it.

"05. Measured/Pending Service Workflow" (legacy) is a different kind of open question: 41 historical enrollments, fully confirmed, but no live workflow anywhere in the account appears to do the same job under a different name. Before archiving it, worth confirming with Josh whether this function was intentionally dropped or is quietly missing its current-day equivalent.

Two exceptions worth fixing rather than archiving outright. "Quote Follow Up Workflow" sits at zero enrollments, but only because of two real bugs, a trigger with no configured filter and a broken stage reference, not because the design is bad. It's actually a sophisticated four-touch escalation that auto-moves a stale quote to Closed-Lost, better built than most of what's currently live; archiving it would mean losing genuinely good design over two fixable bugs. "Form submission follow up workflow" is similarly clever, it checks whether a contact is actively enrolled in "Update Opportunity to Appointment Scheduled & Update Opportunity Owner" to tell whether someone who said they'd book actually followed through, tagging hot versus warm leads accordingly. It also sits at zero enrollments ever, and the workflow it depends on for that check was only partially traced, so it's worth confirming that dependency workflow's own ending before deciding whether this pair is genuinely dead or just currently disconnected from whatever used to feed it.

The entire dormant Customer Order Flow Pipeline and Sales Order Pipeline sub-folders (14 workflows across both) are a single archive-as-a-group candidate: every workflow in both is Draft, and the GHL pipeline stages they're built around, Production Complete, Order Shipped, Installation Scheduled, and the Sales Order equivalents, aren't actually being changed by anything live in the account today. One real caveat before archiving this block: the customer-journey mapping work being scoped separately is looking at reviving exactly this kind of order-and-install tracking, so archiving it now could work against that decision if it goes the other way. Worth checking with whoever owns that mapping work before formally archiving either sub-folder. If it does get archived, two things are worth preserving rather than losing: "08. Installation Complete + Google Review Request" has genuinely well-built NPS-style review gating worth reusing as a pattern, and "02. Partially Sold exterior Workflow" is a clean example of a copy-paste bug (still says "Interior" everywhere) worth keeping as a build-quality reference.

7. Reference Index

A single lookup table, workflow name, purpose, trigger, and status, for all 85 workflows, so nobody has to open the builder just to check what something does. Grouped by the same real GHF folders used throughout this document. The same table also lives as its own spreadsheet, `05-reference-index.csv`, for sorting and filtering directly.

1. Lead Pipeline (New)

Workflow Name	Purpose	Trigger	Status
1. New Lead	Checks for an existing-customer tag and stops if found; otherwise creates an opportunity, assigns Renee, tags/welcomes by email, alerts staff by SMS, and escalates to a direct text to Josh if untouched for 30 minutes.	Strategy-Hero Lead Form or Strategy-Contact Us Form submitted	Published
1.1 New Lead Follow-Up Task Chain	Checks if the contact is active in Appointment Booked or Sold; if not, loops creating 10-minute follow-up tasks for Renee until it is.	A task assigned to Erica or Renee marked complete	Published
2. Attempting Contact	Assigns to Renee, updates/creates the opportunity, emails Main Office/Renee/Kelli, a second email a day later, then tags "nurture" to hand off to Drip/Nurture.	Stage change to Attempting Contact, or a failed outgoing call (busy/voicemail/no-answer)	Published
3. Drip/Nurture	11-email nurture drip, 30 days apart, skips if already booked, exits early on appointment booked. The account's busiest workflow and the reference pattern for the planned partner nurture sequence.	Contact tagged "nurture"	Published
4. Unqualified	Finds/creates the opportunity, tags "disqualified," ends. Closes out this folder.	Stage change to "Unqualified" in Lead Pipeline (NEW)	Published
5. Spam	Sets the opportunity to Spam stage / Abandoned status, then an Enable/Disable DND step (direction not confirmed). No notifications.	Contact tagged "spam," or stage change to Spam	Published

6. Future Appointments	Assigns Renee, sets the opportunity to Future Appointment / Open status. Notify/exit steps beyond this not confirmed (partial trace).	Stage change to "Future Appointment"	Published
7. Customer Reply Response and Escalation	Creates a follow-up task, then texts Kelli/Main Office/Renee an escalation if still unaddressed 30 minutes later. Steps after the escalation text not confirmed (partial trace).	Customer replies via SMS	Published
7.1 Reply Task Completed, Exit	Removes the contact from its workflow and marks it read. Exit companion to workflow 7 above.	A task marked complete by anyone except Renee Isley	Published

2. Sales Pipeline (New)

Workflow Name	Purpose	Trigger	Status
1. Appointment Booked	Assigns Erica/Justin, updates/creates the opportunity, tags by lead source, sends a confirmation email plus 3 reminders (1 day / 2 hr / 1 hr) with staff alerts. Reminder sequence is duplicated 8 times internally; a ready-to-implement fix is documented in Fix Or Consolidate Overlaps.	Appointment status confirmed	Published
2. Appointment Completed	Updates/creates the opportunity, waits 30 minutes, sends a thank-you email. Steps after that not confirmed (partial trace).	Appointment status "Showed," or stage change to Appointment Completed	Published
3. Proposal Sent	Notifies Kelli, then a check-then-nudge sequence (3/4/7-day waits, 3 SMS reminders), ending in a human hand-off task after about 2 weeks if still not sold.	Stage change to "Proposal Sent"	Published
4. Follow Up	Sends a follow-up email and SMS, waits 2 days, then notifies Kelli/Renee/Main Office. Steps after that not confirmed (partial trace).	Stage change to "Follow Up"	Published
5. Sold	Sets the opportunity to Sold / Won and tags the contact "active client." Steps after that not confirmed (partial trace).	Stage change to "Sold"	Published

6. Not sold	Tags "not sold," waits a day, sends a follow-up email, then enrolls the contact into Drip/Nurture.	Stage change to "Not Sold"	Published
7. Not Booked Workflow	Sends a re-engagement email, notifies the assigned owner to call, creates a follow-up task. Also fed directly by 3 current lead-source workflows regardless of its own trigger.	Stage change to "Not Booked" on a pipeline called "Lead Flow Pipeline" (a likely mismatch, see Anomalies)	Published
8. Cancelled Appointment	Removes the contact from Appointment Booked, a 3-touch SMS rebook sequence over about 3 days, ends in a personal task. Confirmed duplicate of Appointment Cancellation Workflow with a diverged build.	Appointment status "cancelled"	Published
9. No Show Recovery	Same 3-touch SMS rebook pattern as 8. Cancelled Appointment, ends in a task assigned to Renee Isley.	Appointment status "no-show"	Published
Appointment Cancellation Workflow	Removes the contact from Appointment Booked, a cancellation email plus 2 SMS touches, ends by tagging "nurture." Confirmed duplicate of 8. Cancelled Appointment with a diverged build.	Appointment status "cancelled"	Published
Self-Booked Appointment Confirmation	Guest-booking branch creates a task, waits 2 hours, sends an internal SMS reminder if still not rebooked. Non-guest branch not confirmed (partial trace).	Appointment status "confirmed"	Published

3. Lead Sources

Workflow Name	Purpose	Trigger	Status
After Business Hours	Sends an SMS if it's currently after business hours, otherwise ends. SMS content and steps after not confirmed (partial trace).	Reply via chat, email, SMS, or call	Published
Auto Missed Call Text-Back	Excludes named partner/team contacts, otherwise assigns Renee, tags, texts the lead back, and notifies staff. Full internal message not confirmed (partial trace).	Missed call	Published

Exterior Screens Facebook Lead Form	Creates an opportunity, tags the source, sends a booking link by email and SMS, and enrolls the contact into "7. Not Booked Workflow" directly if not booked within a day.	Submission of the Exterior Screens Facebook lead form	Published
Google Ad (Exterior) to GHL	Creates the contact from the webhook payload, tags "google_ads_exterior," enrolls into "01. New Lead Opt in Workflow."	Inbound webhook from the ad platform	Published
Google Ads (home page) to GHL	Same as its Exterior sibling; tags "google_ads_homepage," enrolls into "01. New Lead Opt in Workflow."	Inbound webhook from the ad platform	Published
New Lead Landing Page	Creates an opportunity, assigns Kelli, sends an internal SMS. SMS content not confirmed (partial trace).	Contact tagged with one of 4 landing-page promo tags	Published
Partner New Leads Opt-in	Texts and emails the contact, then tags "Drip" as an interim stopgap (confirms the Week 7-8 roadmap's finding). Steps after the tag not confirmed (partial trace).	Contact tagged "partner lead"	Published
Phone Number Tracking	Tags the contact by which number/source the call came in on, then enrolls into "01. New Lead Opt in Workflow" (per its own sticky note).	Call on one of 6 tracked phone numbers	Published
QR Code and Landing Pages Lead Tracker	Tags the contact by source, then enrolls into "1. Appointment Booked."	Appointment booked with a matching UTM source (6 landing-page/QR sources)	Published
Version 3 Facebook Lead Form	Creates an opportunity, tags the source, sends a booking link, enrolls into "7. Not Booked Workflow" if not booked within a day. Consolidates 4 Facebook form versions into one trigger.	Facebook lead form submission (any of 4 form versions)	Published

4. My Blind Co

Workflow Name	Purpose	Trigger	Status
---------------	---------	---------	--------

My Blind Co - GHL Erica	Dedup check, then syncs the contact to MyBlindCo via webhook, tags it as sent, updates the MyBlindCo Contact ID field.	Contact tagged as booked (Google, Facebook, form, or phone)	Published
My Blind Co - GHL Justin	Structurally identical per-salesperson copy of Erica's MyBlindCo sync (see Fix Or Consolidate Overlaps).	Same as Erica's version	Draft

5. Partner Automations

Workflow Name	Purpose	Trigger	Status
(Partners) Map Partner Data to Contact	Writes the Partner's name and record ID onto the associated Partner Contact.	No trigger of its own; entered by "Trigger Partner Data Sync"	Published
(Partners) Write Partner Details to Opportunity	Writes partner details onto the opportunity, but only if the contact's own Contact Type is "Partner," likely the wrong check (see Fix Or Consolidate Overlaps).	Opportunity stage change or creation with Partner Referral Email set, on the "Lead Flow Pipeline" pipeline	Draft
(Partners) Write Referral Email to Opportunity	Copies the Partner Referral Email onto the referred lead's opportunity, if one exists.	Contact's "Partner Referral Email" field added or changed	Published
Trigger Partner Data Sync	Feeds the Partner/Contact association into "(Partners) Map Partner Data to Contact" to write the details over.	Contact tagged "sync partner data" after a manual Partner-to-Contact association	Published

5. Partner Automations / Mapsly

Workflow Name	Purpose	Trigger	Status
(Partners) Workflow: Sync contacts to Mapsly	Sends the contact's details (name/phone/email/address) to Mapsly via webhook.	Contact created with Contact Type "Partner," or tagged "mapsly contact sync"	Published
(Partners) Workflow: Send Partner Objects to Mapsly	Ensures the Partner ID is set, then sends to Mapsly only once an address is present.	Partner record created or changed	Published

5. Partner Automations / Partner Communications

Workflow Name	Purpose	Trigger	Status
(Partners) Installation Complete - Add Partner Contact to Workflow	Looks up the associated partner and routes them into "...Send Communication."	Contact tagged "installation complete" (and already tagged "partner lead")	Published
(Partners) Installation Complete - Send Communication	Texts then emails the partner an installation-complete notice. Steps after the email not confirmed (partial trace).	No trigger of its own; entered by the workflow above	Published
(Partners) Lead Confirmation - Add Partner Contact to Workflow	Looks up the associated partner and routes them into "...Send Communication."	New contact created already tagged "partner lead"	Published
(Partners) Lead Confirmation - Send Communication	Texts then emails the partner a lead-confirmation notice, ends cleanly.	No trigger of its own; entered by the workflow above	Published

6. Inactive Automations / Customer Order Flow Pipeline

Workflow Name	Purpose	Trigger	Status
01. Sold Workflow	Updates/creates the matching opportunity, no notifications.	Contact tagged "sold"	Draft
02. Deposit Received Workflow	Assigns Erica/Justin, emails the sales rep, removes the "sold" tag. Steps after that not confirmed (partial trace).	Stage change to "Deposit Received," or an external payment success	Draft
03. Ordered In Production Workflow	Updates the opportunity, emails the customer an order update.	Contact tagged "ordered"	Draft
04. Production Complete Workflow	Removes the "ordered" tag, assigns to Brittany, sends an internal SMS. Steps after that not confirmed (partial trace).	Stage change to "Production Complete"	Draft

05. Order Shipped Workflow	Emails the customer. Unclear whether it ends there (partial trace).	An "Order Shipped" link click, or stage change to "Order Shipped"	Draft
06. Order Complete Ready for Install	Sends an internal email notification and ends.	Stage change to "Order Complete Ready for Install"	Draft
07. Installation Scheduled Workflow	Emails Kelli, sends an internal SMS. Steps after that not confirmed (partial trace).	Appointment booked on the Installation Appointment Calendar	Draft
08. Installation Complete + Google Review Request	Internal notifications, then an NPS-style customer text: a 9-10 rating gets a Google review link, 8-and-below gets an acknowledgment, anything else gets a generic follow-up. The best-built workflow in this folder.	Stage change to "Installation Complete," or contact tagged the same	Draft
09. Incomplete Remake Reorder Workflow	Assigns Brittany, sends a matching email tailored to which of 3 tags fired.	Contact tagged "reorder," "remake," or "incomplete"	Draft

6. Inactive Automations / Lead Flow Pipeline

Workflow Name	Purpose	Trigger	Status
01. New Lead Opt in Workflow	Creates an opportunity, assigns Kelli, sends a booking link, notifications, and follow-up tasks. Direct ancestor of "1. New Lead," still actively fed by current lead-source workflows; not an archive candidate.	Same form submissions as "1. New Lead"	Published
02. Appointment Booked Workflow	Same reminder sequence as "1. Appointment Booked," duplicated 8 ways. Has 19 real active contacts right now; central to the still-open mismatched-reminder-emails item.	Same appointment-confirmed trigger as "1. Appointment Booked"	Draft (19 active)
02. Appointment Booked Workflow - v19 - copy	Stray unused duplicate of the workflow above, 0 enrollments, structurally identical.	Same as above	Draft

04. No Show Workflow	4-part reschedule email sequence. Steps after the final wait not confirmed (partial trace).	Stage change to "No Show," or a "No Show" link click	Draft
05. Measured/Pending Service Workflow	Tags the opportunity "pending" and ends.	A "Showed" link click, or stage change to "Pending Service"	Draft
06. Sold Workflow	Removes the "pending" tag, adds a "sold" tag.	Stage change to "Sold," or a "Sold" link click	Draft
07. Not Sold Workflow	Removes the "pending" tag, adds a "Drip" tag, hands off to nurture.	Same dual trigger as 06, for "Not Sold"	Draft
08. Drip Campaign Workflow	A long, strategically-named 12-email nurture sequence. Has 2 real active contacts right now; its email angles are worth preserving.	Contact tagged "drip"	Draft (2 active)
Exterior Screens Facebook Lead Form Workflow	Same booking-link sequence as the current version. Steps after the 1-day wait not confirmed (partial trace).	Same Facebook lead form as the current version	Draft
Google Ad (Exterior) to GHL	Same as the current version, enrolls into another workflow before ending (very likely "01. New Lead Opt in Workflow").	Inbound webhook (separate legacy URL)	Draft
Google Ads (home page) to GHL	Same as its Exterior sibling.	Inbound webhook (separate legacy URL)	Draft
Version 3 Facebook Lead Form Workflow	Same booking-link sequence as the current version; confirmed missing the booked-check the current version added before enrolling into "Not Booked."	Facebook lead form submission (3 of 4 form versions)	Draft

6. Inactive Automations / Lead Tracker Workflows

Workflow Name	Purpose	Trigger	Status
After Business Hours Workflow	Same after-hours SMS logic as the current version; confirmed to end cleanly.	Same 4-channel reply trigger as the current version	Draft

Auto Missed Call Text-Back	Same as the current version but assigns Kelli instead of Renee (a minor assignee drift).	Missed call	Draft
Facebook Comments on a Post	Auto-responds, assigns to Brittany.	A specific phrase commented on one named Facebook post	Draft
GHL to Myblindco	Minimal webhook to MyBlindCo, no dedup, tag, or field update; a superseded early experiment.	Appointment confirmed	Draft
Leads from Landing Page (Disabled)	Creates a contact, enrolls into "01. New Lead Opt in Workflow"; itself intentionally disabled.	Inbound webhook	Draft
My Blind Co - GHL	Sends a webhook and ends. Confirmed genuinely broken, not just unused.	Broken (blank pipeline filter, unresolved stage ID)	Draft
Phone Number Tracking	Same as the current version; confirmed target is "01. New Lead Opt in Workflow."	Call on a tracked number	Draft
Promotions and Discounts	Tags "Hot Lead," sends a matching promo email.	A "Holiday Promo" or "10% Discount" link click	Draft
QR Code and Landing Pages Lead Tracker	Same as the current version, enrolls into "1. Appointment Booked."	Appointment booked with a matching UTM source	Draft

6. Inactive Automations / Sales Order Pipeline

Workflow Name	Purpose	Trigger	Status
01. Partially Sold Interior Workflow	Sends a cross-sell email. Steps after the 7-day wait not confirmed (partial trace).	"Partial installation Interior" link click	Draft
02. Partially Sold exterior Workflow	Sends the identical Interior email despite being the Exterior workflow, a confirmed copy-paste bug.	Same "Partial installation Interior" link (should be its own exterior link)	Draft
03. Whole House Sold - Exterior Workflow	Sends a genuinely tailored cross-sell email sequence, correctly built unlike 01/02.	Its own correct "Whole House Sold - Exterior" link	Draft

04. Whole House Sold - Both Workflow	Same shape as 03, but with generic unlabeled email placeholders ("Email 1"/"Email 2").	Its own correct "Whole House Sold - Both" link	Draft
05. Whole House Sold - Interior Workflow	Same generic-placeholder pattern as 04.	Its own correct "Whole House Sold - Interior" link	Draft

6. Inactive Automations

Workflow Name	Purpose	Trigger	Status
Appointment Confirmation Workflow	Confirmation email, 24-hour reminder email, 12-hour SMS reminder, ends.	A pipeline stage change (broken reference)	Draft
Internal: Opportunity Assignment Notification	Two internal notifications. Recipients/content/ending not confirmed (partial trace).	Opportunity's assigned owner changes	Draft
Map closing date from opportunity to contact	Updates the matching contact field. Steps after that not confirmed (partial trace).	Opportunity's closing date changes	Draft
Quote Follow Up Workflow	A 4-touch escalation (SMS/email/SMS/email) over about 2 weeks, auto-closes the opportunity to "Closed - Lost" if it never moves stage. Genuinely good design, undermined by 2 bugs, worth fixing rather than archiving (see Archive What's Genuinely Dead).	Named for a stage change to "Estimate in Review," but has no actual filter configured	Draft
Scouting report workflow	Runs a GPT/AI action and writes the result into a contact field. The only AI-powered workflow in the account.	Opportunity change	Draft
Temporary form automation	Creates the contact/opportunity, sends an internal notification, tags the contact. Reads as an unremoved catch-all stub.	Any form submission anywhere (no filter configured)	Draft

Update Opportunity to Appointment Scheduled & Update Opportunity Owner	Updates/creates the opportunity. The "Update Opportunity Owner" part its name promises isn't confirmed (partial trace).	Appointment confirmed	Draft
Form submission follow up workflow	Checks whether the "yes" group actually followed through by reading the live enrollment state of "Update Opportunity to Appointment Scheduled..."; tags hot vs. warm lead accordingly, or sends a simple confirmation for the other group.	One of 3 form submissions (booking-intent "yes"/"no," or Contact Us)	Draft

8. Recurring Review Cadence

Quarterly, per the roadmap's own suggestion: documentation only stays useful if it gets revisited, not written once and forgotten. Below is a concrete version of what that review actually checks each time, built from what this audit itself learned works; the one open piece is who owns running it.

What each quarterly pass checks: Pull a fresh workflow list from GHL and compare it against the reference index (05-reference-index.csv), flagging anything new, renamed, or removed since the last pass. Check GHL's own "Needs Review" tab for new unresolved errors, that's exactly how the MyBlindCo webhook failures and the Mapsly sync failures surfaced this time, and it's a two-minute check, not a rebuild of this whole audit. Re-check enrollment counts on any Draft or legacy workflow for new active contacts, that's what flagged "02. Appointment Booked Workflow" and "08. Drip Campaign Workflow" as not actually retired. Confirm whether the fixes and decisions from Fix Or Consolidate Overlaps and Archive What's Genuinely Dead actually got carried out, and update both sections to reflect what's done versus still pending. Anything found gets added to the reference index and this document the same way this audit was built, so the documentation keeps compounding instead of going stale the moment it's finished.

Still needs Josh's decision: who actually owns running this each quarter, someone on the Window Valet team or as an ongoing outside item, and when the first one falls. This document was finished in September 2026, so the natural first date is either three months out from here, or whenever the open work in Fix Or Consolidate Overlaps and Archive What's Genuinely Dead actually wraps up, whichever Josh would rather anchor it to.
