Pipelines affected

Root cause found: a pipeline or set of stages was likely deleted or restructured at some point. "My Blind Co - GHL," "Appointment Confirmation Workflow," "Quote Follow Up Workflow," and "Scouting report workflow" all point at a stage that no longer resolves to a name, two of them point at the exact same broken ID. Worth asking whoever's been in the account longest if they recall a pipeline getting deleted or reorganized, one answer likely explains four findings at once.

The good news: two whole pipelines found inactive today represent real opportunity, not just cleanup. The Customer Order Flow Pipeline (deposit through installation) means every paying customer's post-sale experience can be reactivated at once, a relationship-repair and review-generation opportunity. The Sales Order Pipeline is a direct upsell engine for customers who only bought part of their home. And "Scouting report workflow" is a working AI prototype already built, tying directly into the account's future AI roadmap.

Reactivate as-is

Workflow	Why
Internal: Opportunity Assignment Notification	No errors, complements the round-robin assignment fix already made.
Map closing date from opportunity to contact	No errors, simple field sync. Confirm the field is actually used somewhere first.

Repair, then reactivate (valuable, not duplicated elsewhere)

Workflow	What needs fixing
Customer Order Flow Pipeline (9 workflows)	Not Found branch gaps; two "Assign to user: Brittany" references (orphaned user); "07. Installation Scheduled" trigger error; time-based auto-complete tagging should be a real confirmation instead.
Sales Order Pipeline (5 workflows)	Dual error indicators on every workflow; confirm "02. Partially Sold Exterior" isn't still pointed at the interior trigger link; confirm the tracked links themselves exist somewhere customers would see them.
Quote Follow Up Workflow	Every condition check in the sequence references the same broken stage ID; core logic likely fails silently end to end. High priority, this is the only thing currently designed to prevent sent quotes from going stale.
Scouting report workflow	Same broken-reference root cause. Repair unlocks a working AI example for the Week 8 roadmap.

Archive (broken and/or superseded)

Workflow	Why
Appointment Confirmation Workflow	Broken reference, and "1. Appointment Booked" already covers this, fixed.
After Business Hours Workflow (draft copy)	Duplicate of the already-reviewed published version.
Auto Missed Call Text-Back (draft copy)	Duplicate of the already-reviewed published version.
Leads from Landing Page (Disabled)	Already self-marked disabled by its name.
My Blind Co - GHL (base draft)	Broken reference and superseded by the working "-Erica" version.
GHL to Myblindco	Likely superseded by "My Blind Co - GHL Erica" (more robust). Confirm before archiving.

Hold, needs a decision or more info first

Workflow	Open question
Form submission follow up workflow	References another workflow by name that needs confirming still exists; two near-identical triggers need clarifying.
Facebook Comments on a Post	May fall under Shade Strategy's retained marketing scope rather than ours to fix.
Promotions and Discounts	Unassigned "Assign to user" step; needs a decision on whether this promo automation is still wanted at all.
